Classicplus

With well over one million conservatories out in the country all featuring Ultraframe Classic roofs, perhaps we could be forgiven for resting on our laurels.

But here at Ultraframe, our reputation and brand is built on engineering and innovation.

Classic Plus is the perfect example of engineering and innovation in partnership.

Externally and structurally, Classic Plus is unchanged.

Internally, a new range of deeper internal claddings add a whole new dimension to the aesthetics. Mimicking timber conservatories, the 'T' shape undercladdings on the glazing bars look elegant yet strong.

Classic Plus now features Eavesflow ventilation in every facet too - giving the optimum in climate control.

At the ridge, a deeper chambered undercladding helps with thermal performance whilst a new closer fitting internal radius end completes the picture.

Overall, stunning

Classic Plus. Tried, Tested, Trusted

Classicplus

Classic Plus is just as easy to fit as the Classic roof on which it is based.

As you would expect, everything is perfectly cut and prepped to aid easy 'right first time' installation.

Jack rafter undercladding joints and intersections are neat and close fitting.

New tie bar brackets are introduced to allow fitment during build up and yet the claddings slide easily into place for a neat new look.

The deep ridge cladding - chambered for additional thermal performance - lends itself to the fitment of spotlights, with the box like structure perfect for hiding wiring runs and transformers.

And finally, Classic Plus roofs feature Eavesflow vents into every eaves facet - giving controllable cross flow ventilation.

Classic Plus. Tried. Tested. Trusted

Shades

by ultraframe

Shades by Ultraframe – when integrated into the Ultraframe Classic Plus roof – offer a number of unique and exciting benefits.

Creation of soft dappled light and shade.

Ability to create a new contemporary feel or match to your existing furnishings and décor.

Reduction in summer overheating potential – your conservatory is usable more often.

The intelligent fabrics act to create - in effect - 'triple glazing' – warmer in winter.

Controllable ventilation is enhanced over the standard roof – fresher atmosphere and the virtual elimination of condensation.

Choose your Shades for the whole roof, one slope only or even just one panel – you're in control.

Shades can be 'demounted' when you want or to clean - alternatively choose a 'split slider' to give you even more control.

Introduction

We can offer Shades in a range of tantalising fabric and wood weave materials, some of which have excellent thermal performance and some offer great solar control properties.

Wood weave

Natural woods and bamboos from sustainable sources are made into Pinoleum Shades to create the ultimate in soft dappled lighting.

Pinoleum Shades can be manufactured from a collection of 13 natural and painted wood options. Colour co-ordinated edging ribbons and thread colours work together to create soft dappled lighting.

Fabric

Homeowners can explore a different look and feel with our eclectic mix of 22 fabric Shades. Together, they can offer a tantalising and varied degree of light filtration and solar control. Also, they are the perfect complement to existing soft furnishings or can act as a key stimulus to choosing furniture, rugs and accompanying ornaments.

Options

The standard offering is for one piece Shades - there is an option to make large rectangles into split sliders - these are pole operated.

Ask to see the Shades retail brochure for more detailed information.
